HIS GLOBAL CONCLAVE- EDITION 3.0

"Where Young Minds Meet to Debate, Deliberate and Lead."

GROUP OF TWENTY (G20)

BACKGROUND GUIDE

Agenda:

The Role of Artificial Intelligence in the Global Economy

Focus:

Balancing innovation, economic growth, workforce transformation, and ethical governance in an AI-driven world.

LETTER TO DELEGATES

Dear Delegates,

We extend our warmest regards to all delegates representing the Group of Twenty (G20) at the HIS Global Conclave.

As HIS Global Conclave 3.0 brings together future leaders, innovators, and policymakers, we invite you to engage with one of the most transformative developments of the twenty-first century: the growing role of Artificial Intelligence (AI) in the global economy.

Artificial Intelligence is rapidly reshaping industries, economies, and societies. From healthcare and finance to manufacturing and education, AI technologies are enabling new levels of productivity, efficiency, and innovation. Governments and businesses across the world are investing heavily in AI-driven solutions to strengthen economic growth and remain competitive in an increasingly digital landscape.

However, these advancements also present significant challenges. Concerns regarding workforce displacement, data governance, ethical decision-making, digital inequality, and the concentration of technological power have emerged as major global policy concerns. While AI offers unprecedented opportunities,

ensuring that its benefits are distributed equitably remains a critical task for the international community.

As delegates of the G20, you are tasked with examining how nations can harness artificial intelligence to promote sustainable economic growth while safeguarding employment, human welfare, and ethical standards. You must explore how international cooperation can support innovation without widening existing economic disparities between nations.

We encourage you to approach this agenda with critical thinking, creativity, and diplomatic collaboration. Through informed debate and constructive policymaking, delegates will have the opportunity to develop solutions that ensure AI contributes to inclusive prosperity and long-term economic development.

The Executive Board looks forward to the ideas, research, and commitment each delegate will bring to the committee.

Sincerely,

Chairperson & Vice Chairperson
G20

HISTORY OF THE COMMITTEE

G20 – The Group of Twenty

The Group of Twenty (G20) is an international forum comprising nineteen of the world's largest economies and the European Union, representing a significant share of global GDP, trade, and population. Established in 1999 following a series of international financial crises, the G20 was created to promote global economic stability and strengthen international financial cooperation.

Initially formed as a meeting of finance ministers and central bank governors, the G20 evolved into a leaders' summit following the 2008 Global Financial Crisis. Since then, it has become one of the most influential platforms for addressing international economic challenges and coordinating policy responses among major economies.

The G20's agenda extends beyond financial stability and includes sustainable development, climate change, international trade, digital transformation, public health, and technological innovation. Through annual summits and ministerial

meetings, member nations discuss shared challenges and seek collective solutions to issues that affect the global economy.

In recent years, the rapid growth of artificial intelligence has become an important focus of international discussions. AI's ability to transform industries and redefine economic structures has led policymakers to consider its implications for employment, economic competitiveness, digital governance, and international cooperation.

Although the G20 does not have the authority to create legally binding agreements, its discussions often shape global policy directions and influence international standards. As the world enters an era increasingly defined by digital technologies and AI-driven innovation, the G20 remains a vital platform for dialogue on how technological progress can contribute to inclusive and sustainable economic development.

INTRODUCTION TO THE AGENDA

Agenda:

The Role of Artificial Intelligence in the Global Economy

Balancing Innovation, Growth, and Inclusion in an AI-Driven World

Artificial Intelligence is rapidly becoming one of the most influential technologies in the global economy. By enabling machines to perform tasks that traditionally required human intelligence, AI has transformed sectors such as manufacturing, healthcare, finance, transportation, education, and agriculture.

The economic potential of AI is considerable. Businesses use AI to improve efficiency, optimize supply chains, enhance customer experiences, automate routine tasks, and support data-driven decision-making. Governments are increasingly investing in AI research and innovation to strengthen national competitiveness and accelerate economic growth.

At the same time, AI poses important economic and social challenges. One of the primary concerns is the impact of automation on employment. As machines become capable of performing more complex tasks, certain jobs may become obsolete or significantly transformed. While new opportunities may emerge in technology-driven sectors, workers may require reskilling and upskilling to adapt to changing labor market demands.

Another challenge is the growing digital divide between countries and communities. Advanced economies often possess greater access to

technological infrastructure, data resources, and research capabilities. Developing nations may struggle to participate fully in the AI revolution due to limitations in infrastructure, investment, and digital literacy. Without effective international cooperation, technological advancement could deepen global inequalities.

Ethical considerations have also become increasingly important. Concerns regarding privacy, algorithmic bias, data protection, transparency, accountability, and cybersecurity continue to shape discussions about AI governance. Policymakers are seeking ways to encourage innovation while ensuring that AI systems are developed and deployed responsibly.

The international community must therefore consider how artificial intelligence can contribute to sustainable development, economic growth, and social inclusion. Delegates are invited to explore strategies that promote innovation while protecting employment, reducing inequalities, fostering international cooperation, and ensuring the responsible use of emerging technologies.

The challenge before the committee is to create a future where AI serves as a tool for shared prosperity rather than a source of economic division.

KEY TREATIES AND ACHIEVEMENTS

1. G20 AI Principles

The G20 AI Principles provide guidance for the responsible development and use of artificial intelligence. They emphasize human-centered values, transparency, accountability, security, and sustainable economic growth.

These principles encourage governments and businesses to adopt AI in ways that benefit society while minimizing risks.

2. OECD Principles on Artificial Intelligence

Adopted in 2019, the OECD AI Principles were among the first international standards for responsible AI governance. They promote fairness, transparency, robustness, accountability, and human-centered innovation.

Many countries have used these principles as a foundation for national AI policies.

3. UNESCO Recommendation on the Ethics of Artificial Intelligence

Adopted in 2021, this framework provides ethical guidelines for the development and deployment of AI technologies.

It addresses human rights, inclusion, transparency, environmental sustainability, data governance, and responsible innovation.

4. Sustainable Development Goals (SDGs)

Artificial Intelligence has the potential to contribute to numerous SDGs, including:

- SDG 4: Quality Education
- SDG 8: Decent Work and Economic Growth
- SDG 9: Industry, Innovation and Infrastructure
- SDG 10: Reduced Inequalities

The international community continues to explore how AI can accelerate progress toward these goals.

5. Global Digital Economy Initiatives

Several international platforms and organizations are promoting digital transformation, cross-border innovation, and technological cooperation.

These initiatives seek to help countries build digital infrastructure, improve connectivity, and participate effectively in the global digital economy.

6. National Artificial Intelligence Strategies

Many countries have developed national AI strategies to strengthen innovation, scientific research, digital skills, and economic competitiveness.

These strategies often focus on investment in research, workforce development, ethical governance, and technological leadership.

7. Workforce Reskilling and Future Skills Programmes

Governments, educational institutions, and businesses are increasingly investing in workforce development initiatives to prepare employees for changing job markets.

These programmes emphasize digital literacy, data analysis, AI literacy, critical thinking, and adaptability.

8. International Cooperation on AI Governance

Global discussions continue regarding the need for common standards, regulatory frameworks, and cooperative mechanisms for AI governance.

These efforts seek to balance innovation with ethical responsibility, economic inclusion, and public trust.

CONCLUSION

As delegates of the G20, you are entrusted with addressing one of the most consequential economic transformations of our time.

Artificial Intelligence is reshaping the global economy, creating opportunities for innovation, productivity, and growth. At the same time, it presents significant challenges related to employment, inequality, governance, and ethical responsibility.

The task before the international community is not to determine whether AI should shape the future, but rather how that future should be shaped. Delegates must consider how governments, businesses, educational institutions, and international organizations can work together to ensure that technological progress benefits all sections of society.

As you deliberate, reflect on how AI can promote sustainable economic development, support workforce transformation, foster innovation, and reduce inequalities between and within nations.

Through informed debate, collaborative diplomacy, and evidence-based policymaking, delegates have the opportunity to contribute towards building a global economy that is innovative, inclusive, and prepared for the challenges of the future.

Best of luck, delegates!

Regards,
The G20 Executive Board
HIS Global Conclave 3.0
